INGAL CIVIL PRODUCTS

- MASH TL3 Compliant
- Heavy duty configuration
- Fewer components
- Rapid installation

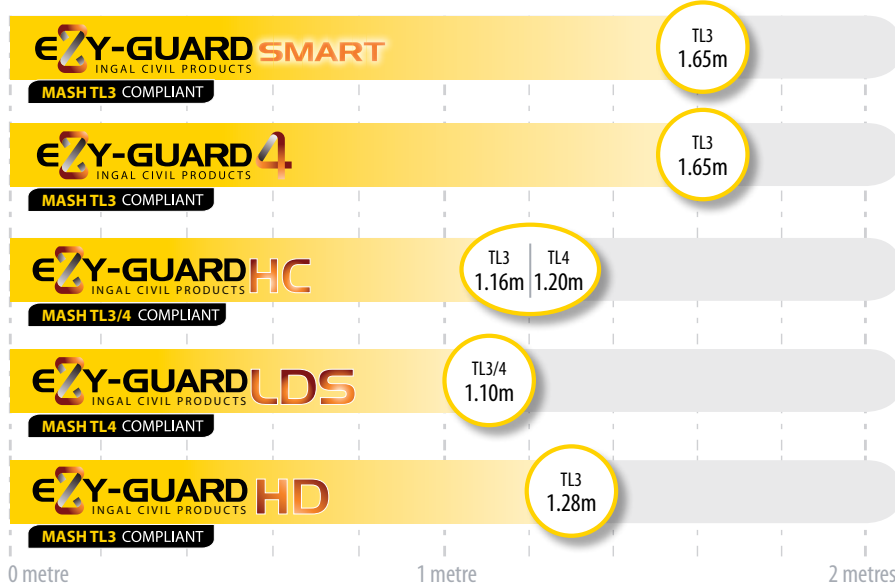

INGAL ELEVATED BARRIER

- Integrated components designed for Bridge Barriers
- Can be bolted directly to the bridge structure

DESIGNED AND MADE IN AUSTRALIA BY INGAL CIVIL PRODUCTS

Comparison of Ezy-Guard Deflections at 2m Post Spacing

The Ezy-Guard Range

The major point for comparison is the Crash Test Deflection. This is the amount of yielding that occurs to the barrier when impacted under crash test conditions (typically MASH TL2, TL3 or TL4).

Reducing the post spacing will affect the deflection. Contact your Ingal Civil representative for more information.

All Ezy-Guard products feature:

- High level of crash protection.
- Rapid installation and narrow width.
- Consideration for motorcyclists with rounded post corners, shielded posts and no aggressive edges.
- Baseplate mounted options.
