

Pump Command® Helps Your Operation Pump Smarter, Not Harder

Valley® offers solutions for large and small farms to automate pumping operations. Save time and resources with wireless remote monitoring, plus the ability to control all of your pumps and link them to your fleet of pivots or linears.

Valley Pump Command® is like an easy button for your pumping – just turn your pivots on, and your pump station takes care of itself.

## Valley Pump Command offers:

- Intuitive Pump Control – All three tiers offer an automatic VFD set point control solution that automatically matches output to demand for multiple pumps and pivots
- Maximized efficiency – Save energy and water at all times by using only the pressure required
- Time savings – Eliminate trips to the pumps
- Cost savings – Avoid the expensive and difficult digging necessary to install wires
- Reporting capabilities – Integration with Valley irrigation management solutions for comprehensive recordkeeping
- Flexibility – Valley offers several tiered solutions to meet your specific needs

Save Money

Save Time

Improve Efficiency

Not every farm is the same, and their needs are different. The water management experts at Valley work with you to understand your operation's requirements and engineer the correct solution based on your precise situation.

## Basic

- Monitor and control up to four pivots
- Integrates with most VFDs
- Intuitive Pump Control – automatically adjusts and optimizes pump station set points to save money by ensuring all pivots use the minimum pressure required
- Full integration with AgSense® 365
